ADARNA

BACKEND UPDATE · OCTOBER 2026

61 features, live.

Every desktop feature built into ten cloud services, deployed and tested end to end, plus 18 mobile features.

COMPANY	PERIOD	STATUS
Adarna Inc.	October 2026	Public

01

Backend & Cloud

All 61 desktop features now run in ten cloud services on AWS, tested end to end against the live servers.

Ten services, one contract. Built, reviewed and deployed in October.

BACKEND & CLOUD

61 features, 10 services, live

61	10	111
FEATURES BUILT	CLOUD SERVICES	END-TO-END TESTS PASS

The services

Identity · Task · Calendar · Habit · Session · Health Data · Capacity · Content · Planner · Notification

Every desktop feature was built into ten services, each owning one kind of data. They were reviewed, merged and deployed to our AWS development cloud on 19 and 20 October: 1,124 TypeScript and 216 Python tests pass, and all 111 end-to-end tests pass against the live servers.

The final check

58 of the 61 features work on the live servers, and none failed. The other three can only be proven with the real band or Mac: automatic Do Not Disturb, email-code sign-in and breaks for energy.

BACKEND & CLOUD

The platform under it

8 OCTOBER

Foundation

New cloud in us-west-1, with email-code sign-in.

9 TO 11 OCTOBER

Engines

Capacity, focus music, band metrics and live data.

19 TO 20 OCTOBER

61 features

Ten services built, deployed and tested.

21 OCTOBER

Mobile

18 mobile features added.

ALSO THIS MONTH

- **Focus music** streams in production, from private links that expire.
- **Recovery** is measured from the band, with four questions as the fallback when it couldn't measure.
- **18 mobile features**, including the alerts engine, joined the main backend.
- **Documentation** for the nine new services: about 2,500 lines, every code link checked.
